What is HomeMe?

HomeMe is a web application that will connect tenants and landlords.

More About HomeMe

Divide the project into two pieces:

(1) Custom-ish user profiles for landlords/prospective tenants
(2) The marketplace-like environment for users to post their listings.

Sprint 1: User Stories

User story 1: As a landlord, I would like to display my profile

User story 2: As a user, I would like to display my team profile

User story 3: As a user, I would like to post my (possibly housing group) needs for renting

Sprint 2: User Stories

User story 1: As a landlord, I would like to list my properties for rent

User story 2: As a user, I would like to see houses based on a location I input
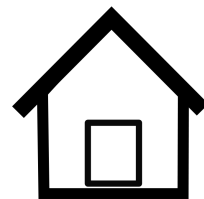

User story 3: As a user, I would like to send my profile to a future landlord

Sprint 3: User Stories

User story 1: As a user of, I would like to make and reply to comments on a property posting

User story 2: As a landlord, I would like to see any future tenants' communication
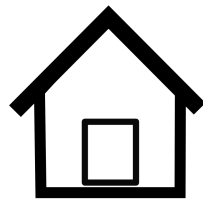

HomeMe Risks

Risk 1: Unfamiliar technology

Risk 2: Possible hidden complexity with some of the "simpler" features

Risk 3: Possible incompatibility with API usage

Risk 4: Working together in a professional environment for the first time
